Webtix Rental is an Affordable Internet Ticketing Software for Small Venues and Non-profits

Of course, you want to sell your tickets online. Everyone is doing it. Center Stage Software has had an internet module for years, but many of our customers, especially non-profits, cannot afford the Webtix module. Now you can subscribe to Center Stage Software's Webtix Rental at \$2 per day. It provides real-time integrated internet sales and reporting. People in your office will have access to the same seats at the same time as everyone on the internet.

Features and New Webtix Options

- Seat selection is by a 'best available,' or user-selectable listing. If you are using best available, the seats get selected in whatever order you choose. Because of the wide variety of opinions as to what is the best available, there are three separate criteria for what is considered best available.
- Emailed response with invoice.
- Separate home page possible for each show.
- Print at home tickets with bar codes are possible.
- Promotional price codes with each show: these codes include a valid date and time range, special code to be entered, maximum number that can be sold and price.

There are no yearly fees or transaction fees other than the Webtix Rental at \$2.00 a day.

The monies derived from your online sales go directly to your bank account using the Authorize.net or MerchantPlus.com gateway. Think of the Webtix rental as a subscription that can be started and stopped at any time. Note: there is a 60-day minimum to subscribe only because we have found our customers usually need at least two months to advertise to their patrons that tickets are available online.

Handling credit cards online:

Handling credit cards puts you at risk. You must follow the guidelines of the PCI standard. If you don't, you can be put out of business in a matter of minutes. Click here for [PCI Security Specifications](#). Because complying with the regulations is so difficult and important, a service like [Authorize.net](#) or [MerchantPlus.com](#) makes a lot of sense. Both of them store the credit card numbers on high security sites. You avoid the CISP regulations by not keeping the card numbers in your office. Any maintenance (refunds, cancellations, extra charges) is done through a web interface.

Talk to your bank because they set the rules. Tell them that you are planning to do sales over the internet. They will tell you that you need an e-commerce account, as well as an e-commerce certificate. They may insist that you have a site-certificate (to give you the little lock at the bottom of your browser window). Do things the banker's way. If you don't, fines start at \$10,000 and they will revoke your merchant account.
